Fulfillment by Amazon (FBA) Customer Returns FAQ

Document ID: AMZ-IN-FBA-FAQ
Marketplace: Amazon.in
Scope: Seller and customer operational policies governing FBA inventory returns and customer service.

1. Customer Service Ownership for FBA Orders

For all orders fulfilled by Amazon (FBA), Amazon Customer Service manages customer inquiries, return requests, carrier pickups, and refund issuance. Third-party sellers cannot intercept or refuse FBA returns initiated through Amazon's customer support portal.

2. Return Intake and Fulfillment Center Disposition

When an FBA product is returned by a customer, it is received at an Amazon fulfillment center and evaluated:

- **Sellable Condition:** If the item is intact, unopened, and undamaged, it is returned to the seller's active inventory for resale.
- **Customer-Damaged / Defective:** If the item was opened, defective, or damaged by customer usage, it is flagged as unsellable. Sellers may request disposal or removal.
- **Carrier-Damaged:** If damage occurred during transit, Amazon reimburses the seller in accordance with FBA Lost and Damaged Inventory Reimbursement Policies.

3. Customer Refund Timelines for FBA

Customer refunds for FBA items are initiated automatically when the carrier records the return pickup scan or upon inspection at the fulfillment center. Prepaid orders are credited to original payment instruments within 3-5 business days; Pay on Delivery refunds are credited to Amazon Pay balance or designated bank accounts.
