Amazon.in Seller-Fulfilled Order Replacements Policy

Document ID: AMZ-IN-SELLER-REPLACEMENTS
Marketplace: Amazon.in
Scope: Merchant Fulfilled Network (MFN) replacement order creation, inventory checks, and fallbacks.

1. Seller-Fulfilled Replacement Workflow

When a buyer requests replacement for an order fulfilled directly by a third-party seller (MFN), Amazon facilitates a replacement workflow under defined operational conditions:

- **Reported Issue:** The customer must report a defect, transit damage, or wrong item delivery within the category return window.
- **Matching Inventory Check:** A replacement order is generated only if the seller has an active, identical SKU in stock at the time of processing.
- **Out-of-Stock Refund Fallback:** If the seller lacks identical stock, the replacement request converts automatically into a full refund.
- **Return Pickup & Delivery SLA:** The seller must coordinate return pickup of the original unit or dispatch the replacement parcel within 2 business days.

2. Safe-T Claims for Seller Protection

If a buyer receives a refund or replacement but returns an empty box, a damaged unit, or a different product, MFN sellers may submit a SAFE-T (Seller Assurance for E-Commerce Transactions) claim with photo evidence to seek financial reimbursement from Amazon.
